Education

Dhirubhai Ambani Institute of Information and Communication Technology (DA-IICT) <i>M.Sc. Data Science</i> CPI: 8.66 Maharaja Sayajirao University of Baroda <i>B.Sc. Statistics (Honours)</i> CPI: 6.57	Gandhinagar, Gujarat 2025 – 2027 Vadodara, Gujarat 2021 – 2024
---	---

Experience

Research Minor – Digital Consumption & Academic Performance <i>Dhirubhai Ambani University - Under Prof. Bhaskar Chaudhary</i>	Gandhinagar, Gujarat Ongoing
- Developing a Python pipeline to ingest and harmonize cross-platform telemetry across laptops and smartphones, standardizing raw activity data for longitudinal screen-time research. - Building a multi-tier semantic categorization engine using lookup caches, rule-based matching, NLP metadata, and active-learning review to automate software classification and reduce manual labeling. - Formulating behavioral metrics, hypothesis-driven statistical analyses, and visual dashboards to quantify attentional fragmentation, evaluate digital routines, and uncover student usage patterns.	

Projects

RupeeRisk: USD/INR Forecasting <i>Python, BigQuery, scikit-learn, statsmodels, pmdarima, Streamlit, Plotly</i>	 
- Engineered a four-channel geopolitical tension index from GDELT Goldstein Scale data via BigQuery to model USD/INR movements, verifying stationarity of the exchange rate and all predictors using ADF unit-root tests before modeling. - Benchmarked 9 forecasting models through a 200-week rolling backtest, using first-differenced and one-week lagged features to reduce spurious regression and avoid look-ahead bias. - ARIMAX delivered the strongest risk-adjusted performance (1.30 Sharpe), while Lasso achieved 58.5% directional accuracy; evaluated the strategy at 17.67% cumulative return against India's 6.5% risk-free rate and identified carry-cost limitations.	
IndiaShield: Defense Budget Intelligence Platform <i>Python, Tableau, Streamlit, Pandas</i>	  
- Built a 6-module strategic intelligence platform consolidating SIPRI military expenditure, Union Budget, and MoD Annual Report data with real NSE market data across 24 years. - Surfaced a "Modernisation Paradox" where capital acquisition share fell from 38.3% to 28.9% (FY16–FY25) despite 2.5× nominal budget growth. - Published a parallel Tableau Public dashboard with custom Sankey diagrams, choropleths, and treemaps, paired with an interactive Streamlit app for dynamic filtering.	
ShramikSaathi <i>LLaMA 3.1 8B, PyTorch, Hugging Face Transformers, LoRA/PEFT, DPO (TRL), FAISS, Gradio</i>	
- Architected a multi-stage RAG + ReAct agent pipeline with cross-domain routing, slot extraction, a sufficiency gate, FAISS retrieval over 311 documents, tool-calling, and LLaMA 3.1 8B generation; fine-tuned the retriever to raise MRR@5 from 0.668 to 0.725. - Designed the Condition Coverage Score (CCS) to capture eligibility-verification failures not reflected in standard RAG metrics and validated it through a 4-configuration ablation study. - Fine-tuned the model through LoRA SFT + DPO using 373 human-labeled preference pairs, raising CCS from 0.000 to 0.714 and sufficiency-gate accuracy from 50.0% to 99.1%, with zero citation fabrication on held-out evaluation data.	
LogiSense <i>PostgreSQL, SQL, Python, Pandas, HTML/CSS/JavaScript</i>	 
- Designed a 7-table normalized PostgreSQL solution and authored 10 analytical SQL queries to analyze logistics operations and power 9 interactive dashboards. - Implemented an adaptive IQR-based anomaly detection method to replace fixed thresholds, improving robustness across varying inventory distributions and reducing outlier-driven false positives. - Created a client-side analytics interface, using AI-assisted development for HTML/CSS/JavaScript, to make backend analysis accessible through customer segmentation, churn analysis, anomaly insights, and export functionality; deployed the application on Netlify.	

Technical Skills

Programming & Data: Python, R, SQL, Microsoft Excel

Databases & Tools: PostgreSQL, Google BigQuery, Git, Jupyter Notebook

Data Analysis & Visualization: Pandas, NumPy, Tableau, Power BI, Streamlit, Plotly, Matplotlib, Seaborn

Machine Learning: Data Preprocessing, Feature Engineering, Classification, Regression, Ensemble Methods, Time Series Forecasting

Statistics & Modeling: Hypothesis Testing, Regression Analysis, Sampling, Causal Inference, Model Evaluation

Generative AI (Advanced): NLP, LLMs, RAG, AI Agents, Prompt Engineering, Hugging Face Transformers, PyTorch, LoRA/PEFT, DPO (TRL), FAISS

Achievements & Certifications

- **Fintech Essentials Professional Certificate** | *GIFT International Fintech Institute (GIFT IFI)*
- Earned the **Google Analytics 4 (GA4) certification** and **Product Analytics certification** (Pandora).
- Volunteered at a **humanitarian NGO in Vadodara**, helping manage ration records, assisting beneficiaries, and supporting day-to-day operational activities.
